II. RISK FACTORS

1. Standard Risk Factors

A) Standard Risk Factors for investments in SIF

- a) Investment in SIF Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- b) As the price / value / interest rate of the securities in which the Investment Strategy invests fluctuates, the value of your investment in the Investment Strategy may go up or down, depending on the various factors and forces affecting the capital markets.
- c) Past performance of the Sponsors or its Group /AMC/SIF does not guarantee future performance of the Investment Strategy.
- d) The name of the Investment Strategy does not in any manner indicates either the quality of the Investment Strategy or its future prospects and returns.
- e) The Sponsors are not responsible or liable for any loss resulting from the operation of the Investment Strategy beyond the initial contribution of an amount of Rs. 1 lakh made by it towards setting up the Fund.
- f) Diviniti SIF Investment Strategy(s) are not a guaranteed or assured return Investment Strategy(s).
- g) Investment in equity and equity related securities including future / option contracts involve high degree of risks and investors should not invest in the Investment Strategy unless they can afford to take the risk of losing their investment.

Risks associated with investing in Equities and Equity related Securities:

- The value of the Investment Strategy's investments may be affected by factors affecting the securities markets such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Investment Strategy may be affected.
- There is an element of unpredictable market cycles that could run for extended periods.
- Loss of value due to obsolescence, or regulatory changes coupled with structural rigidity of the Investment Strategy can lead to permanent loss of capital.
- Equity Securities and equity-related Securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made by the Investment Strategy may be restricted by trading volumes and settlement periods. This may impact the ability of the Unit Holders to redeem their Units. In view of this, the Trustee has the right, in its sole discretion to limit Redemptions (including suspending Redemption) in certain circumstances [outlined in Section I - 'Restrictions on Redemptions'].
- Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Investment Strategy to make intended Securities purchases, due to settlement problems, could cause the Investment Strategy to miss certain investment opportunities. Similarly, the inability to sell Securities held in the Investment Strategy's portfolio could result, at times, in potential losses to the Investment

Strategy, should there be a subsequent decline in the value of Securities held in the Investment Strategy's portfolio.

- Investments in equity and equity related Securities involve a degree of risk and investors should not invest in the Investment Strategy unless they can afford to take the risk of losing their investment
- Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Investment Strategy to make intended Securities purchases, due to settlement problems, could cause the Investment Strategy to miss certain investment opportunities. Similarly, the inability to sell Securities held in the Investment Strategy's portfolio could result, at times, in potential losses to the Investment Strategy, should there be a subsequent decline in the value of Securities held in the Investment Strategy's portfolio.
- Investments in equity and equity related Securities involve a degree of risk and investors should not invest in the Investment Strategy unless they can afford to take the risk of losing their investment
- The liquidity and valuation of the Investment Strategy's investments due to its holdings of Securities proposed to be listed may be affected if they have to be sold prior to the target date for disinvestment.
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with Securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in Securities proposed to be listed within the regulatory limit. This may however increase the risk of the portfolio.

There is no guarantee the investment / dis-investment decision will result into profit.

Related to Debt & hybrid Investment Strategy(s):

Different types of securities in which the Investment Strategy would invest as given in the Investment Strategy Information Document carry different levels and types of risk. Accordingly, the Investment Strategy's risk may increase or decrease depending upon its investment pattern.

1. Risks associated with investing in debt and / or Money Market Securities:

The following are the risks associated with investment in debt and Money Market securities:

Interest Rate Risk: As with all debt securities, changes in interest rates may affect the Investment Strategy's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Spread Risk: Yield Spreads between fixed income securities might change. Example: Corporate Bonds are

exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which might adversely affect the NAV of the Investment Strategy. Similarly, in case of floating rate securities, where the coupon is expressed in terms of a spread or mark up over the benchmark rate, widening of the spread results in a fall in the value of such securities.

Liquidity Risk: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its true value. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of debt securities may change, depending on market conditions. At the time of selling the security, the security can become less liquid (wider spread) or illiquid, leading to loss in value of the portfolio. Securities that are proposed to be listed generally carry a higher liquidity risk compared to listed securities.

Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Investment Strategy and may lead to the Investment Strategy incurring mark to market losses and losses when the security is finally sold. Liquidity risk is greater for thinly traded securities, lower-rated bonds, bonds that were part of a smaller issue, bonds that have recently had their credit rating downgraded or bonds sold by an infrequent issuer may be relatively illiquid. Bonds are generally the most liquid during the period right after issuance when the bond typically has the highest trading volume.

Credit Risk/ Default Risk: Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and /or principal payment obligations and/or on violation of covenant(s) and/or delay in scheduled payment(s). Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. Government Security is a sovereign security and the default risk is considered to be the least. Corporate bonds carry a higher credit risk than Government Securities and among corporate bonds there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"). A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Investment Strategy in case of counterparty default.

Settlement Risk: Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Investment Strategy to make purchases in intended securities due to settlement problems could cause the Investment Strategy to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Duration Risk: The modified duration of a bond is a measure of its price sensitivity to interest rates movements, based on the average time to maturity of its interest and principal cash flows. Bond portfolio managers increase average duration when they expect rates to decline, to get the most benefit, and decrease average duration when they expect rates to rise, to minimize the negative impact. If rates move in a direction contrary to their expectations, they lose.

Inflation Risk: Inflation causes tomorrow's currency to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices. Inflation indexed securities such as Treasury Inflation Protection Securities (TIPS) are structured to remove inflation risk.

Performance Risk: Performance of the Investment Strategy may be impacted with changes in factors which affect the capital market and in particular the debt market

Selection Risk: This is the risk that a security chosen will underperform the market for reasons that cannot be anticipated.

Timing Risk: It is the risk of transacting at a price based on erroneous future price predictions resulting to losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

Call Risk: Some corporate, municipal and agency bonds have a "call provision" entitling their issuers to redeem them at a specified price on a date prior to maturity. Declining interest rates may accelerate the redemption of a callable bond, causing an investor's principal to be returned sooner than expected. In that scenario, investors have to reinvest the principal at the lower interest rates. (See also Reinvestment risk.)

Concentration Risk: This is the risk arising from over exposure to few securities/issuers/sectors. The Investment Strategy intends to invest substantially in Tri – Party Repo. For risks relating to investments in Tri – Party Repo, please refer to the section on 'Risks associated with investing in Securities Segment and Tri-party Repo trade settlement' herein below in this document.

Legislative Risk: This is the risk that a change in the tax code could affect the value of taxable or tax-exempt interest income.

B) Risk factors of not maintaining average AUM of Rs. 20 crore on half yearly rolling basis (Applicable only for open ended debt oriented Investment Strategy(s) of Diviniti SIF)

The Investment Strategy(s) shall maintain an average AUM of Rs. 20 crore on half yearly rolling basis. In case, the average AUM falls below Rs. 20 crore, the AMC shall scale up the AUM of such Investment Strategy within a period of six months so as to maintain the average AUM of Rs. 20 crore on half yearly rolling basis, failing which the Investment Strategy shall be wound up in accordance with the provisions of Regulation 39 (2) (c) of SEBI (Mutual Funds) Regulations, 1996 as amended from time to time or Consolidated with other Investment Strategy in accordance with the provisions of SEBI Master circular dated June 27, 2024.

C) Risks associated with different derivative strategies

- The Investment Strategy may invest in derivative products in accordance with and to the extent permitted under

the Regulations. The use of derivatives requires an understanding of the underlying instruments and the derivatives themselves. The risk of investments in derivatives includes mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

- Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount.
- The Investment Strategy may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limits or circuit breakers, the Investment Strategy may face a liquidity issue.
- The option buyer's risk is limited to the premium paid, while the risk of an option writer is unlimited. However, the gains of an option writer are limited to the premiums earned. Since in case of the Investment Strategy all option positions will have underlying assets, all losses due to price-movement beyond the strike price will actually be an opportunity loss.
- The relevant stock exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price.
- Investments in index futures face the same risk as investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks.
- The Investment Strategy bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indexes or other financial or economic factors in establishing derivative positions for the Investment Strategy.
- The risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends on the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involves uncertainty and the decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- As and when the Investment Strategy trades in derivative products, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor such transactions and the embedded market risks that a derivative adds to the portfolio.

Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:

- a) **Credit Risk:** This occurs when a counterparty defaults

on a transaction before settlement and therefore, the Investment Strategy is compelled to negotiate with another counterparty at the then prevailing (possibly unfavourable) market price, in order to maintain the validity of the hedge.

- b) **Market Liquidity Risk:** This is where the derivatives cannot be sold at prices that reflect the underlying assets, rates and indices.
- c) **Model Risk:** This is the risk of mis-pricing or improper valuation of derivatives.
- d) **Basis Risk:** This is when the instrument used as a hedge does not match the movement in the instrument / underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer / industry assets.

D) Other risk factors

I. Swing pricing:

Swing pricing refers to a process of adjustment of a fund's net asset value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund. Swing pricing is aimed to ensure fairness of treatment of entering, exiting and existing investors in SIF Investment Strategy(s), particularly during market dislocation.

Impact of Swing Pricing:

- a) When the Swing pricing framework is triggered and swing factor is made applicable, both the incoming investors (i.e. who submit purchase / switch-in requests) and outgoing investors (i.e. who submit redemption / switch out requests) shall get NAV adjusted to the extent of swing factor applied.
- b) Swing pricing will be made applicable to all unitholders at PAN level with an exemption for redemptions upto Rs. 2 Lacs for each Investment Strategy.
- c) Disclosures pertaining to NAV adjusted for swing factor along with performance impact shall be made in the prescribed format in the Investment Strategy Information Document and in Investment Strategy wise Annual Reports and Abridged summary thereof.

II. CORPORATE DEBT MARKET DEVELOPMENT FUND (CDMDF):

Background

CDMDF is set up as a Investment Strategy of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF Investment Strategy(s) to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help fund managers of such debt Investment Strategy(s) to better generate liquidity during market dislocation to help the Investment Strategy(s) fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of

SEBI (Mutual Funds) Regulations, 1996 read with SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated July 27, 2024 Clause 16A2 on Investment by Mutual Fund Investment Strategy(s) in units of CDMDF, the debt Investment Strategy(s) shall invest 25 bps of their AUM as on December 31, 2022 in the units of CDMDF. An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of Investment Strategy AUM is invested in units of CDMDF. - Before making an application for Units, prospective investors should review / study this SAI and the Investment Strategy Information Document ("ISID") carefully and in their entirety

and should not construe the contents thereof or regard the summaries contained therein as advice relating to legal, taxation, or financial / investment matters. Investors should consult their own professional advisor(s) as to the legal, tax or financial implications or other consequences resulting from the following:

- Subscription, gifting, acquisition, holding, disposal (by way of sale, switch or Redemption or conversion into money) of Units; and to the treatment of income (if any), capitalisation, (by way of sale, switch or Redemption or conversion into money) of Units; and
- To the treatment of income (if any), capitalisation capital gains, any distribution and other tax consequences relevant to their Subscription, acquisition, holding, capitalisation, disposal (by way of sale, transfer, switch, Redemption or conversion into money) of Units within their jurisdiction or under the laws of any jurisdiction to which they may be subject.
- Neither the SIF nor the Sponsor nor the AMC has authorized any person to give any information or make any representation, either oral or written, that is not consistent with this SAI or ISID in connection with the issue of Units. Prospective investors are advised not to rely on any information or representation not incorporated in this SAI, unless it has been authorized by the SIF, the AMC or the Sponsor. Any subscription or Redemption made by any person on the basis of statements or representations which are not contained or which are inconsistent with the information contained in this SAI shall be solely at the risk of the investor.
- The tax benefits described in this SAI are as available under the prevailing taxation laws. The information given is included only for general purpose and is based on the advice received by the AMC regarding the laws and practice currently in force in India. Investors / Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Investment Strategy will endure indefinitely. In view of the individual nature of tax consequences, each Unit Holder is advised to consult their own professional tax advisor.
- SIFs invest in Securities which may not always be profitable and there can be no guarantee against loss resulting from investing in the Investment Strategy. The Investment Strategy's value may be impacted by fluctuations in the bond markets, fluctuations in interest rates, prevailing political, economic and social environments, changes in government policies and other factors specific to the issuer of the securities, tax Laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- Redemptions due to a change in the fundamental attribute of the Investment Strategy or due to any other reason may entail tax consequences. Such taxes, if any, shall be borne by the investor and neither the SIF nor the Investment Strategy or the AMC shall be liable for any tax consequences that may arise.
- In terms of the Prevention of Money Laundering Act, 2002 ("PMLA") the rules issued there under and the guidelines / circulars issued by SEBI regarding the Anti Money Laundering Laws, all intermediaries, including SIFs, are required to formulate and implement a client identification programme, and to verify and maintain the record of identity and addresses of investors. While at all times the Trusteeship Company and the Asset Management Company will endeavour that excessive holding of Units in the Investment Strategy among a few Unit holders is avoided, however, the funds invested by these aforesaid persons may acquire a substantial portion of the Investment Strategy's outstanding Units and collectively may constitute a majority unit holder in the Investment Strategy. Redemption of Units held by such persons may have an adverse impact on the value of the Units of the Investment Strategy because of the timing of any such redemption. It may also have impact on the liquidity of the Investment Strategy, which may lead to an adverse impact on the NAV of the Investment Strategy.
- As the liquidity of the Investment Strategy investments may sometimes be restricted when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or efficient functioning of markets, the time taken by the Fund for Redemption of Units (subject to lock in period, if any) may be significant during such events. In view of this, the AMC has the right, in its sole discretion, on the basis of specific approval of the Board of Directors of the AMC and the Trustee Company, and in accordance with applicable regulations, circulars and other prevalent guidelines, to limit redemptions under certain circumstances. Please refer to the paragraph "Right to Limit Redemption" in the SAI for further details.

Non-profit organizations (NPO):

As per Prevention of Money-laundering (Maintenance of Records) Amendment Rules, 2023 (PML) dated 7th March 2023, definition of Non-Profit Organization (NPO) has been revised. "Non-profit organization" means any entity or organisation, constituted for religious or charitable purposes referred to in clause (15) of section 2 of the Income-tax Act, 1961 (43 of 1961), that is registered as a trust or a society under the Societies Registration Act, 1860 (21

If the Trust, Society or Section 8 Companies as defined above is a NPO, then it must get itself registered in the DARPAN Portal of NITI Aayog <https://ngodarpan.gov.in/>. This has been made mandatory as per PML amendment date 7th March 2023, requiring the financial institutions, intermediaries to get the NPO entities registered in DARPAN before allowing transactions.

Darpan is a free service provided by the NITI Aayog that would help NPOs and the government create stronger collaborations. Completing the NPO Darpan Registration process is necessary for making investments and other financial transactions.

As per new PML amendment, every Banking Company or Financial Institution or intermediary has to ensure that the NPO it is servicing gets registered on the DARPAN Portal, if not already registered. New accounts / folios will not be created for NPOs by the Mutual Funds, without such registration.

V. INVESTMENT VALUATION NORMS FOR SECURITIES AND OTHER ASSETS

A. EQUITY AND EQUITY RELATED SECURITIES:

Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology
Equity, Preference shares and Cumulative Convertible Preference Shares and Debentures	Traded	<p>The AMC has selected the National Stock Exchange (NSE) as the Principal Stock Exchange. In respect of the Index Funds, the Principal Stock Exchange would be the Exchange where the underlying benchmark index has been set up.</p> <p>a) Traded securities shall be valued at the day's closing price on the NSE.</p> <p>b) When on a particular day, a security has not been traded on the NSE, the closing price of the security on the Bombay Stock Exchange (BSE) will be considered for valuation. For this purpose, only NSE and BSE have been considered as the recognised Stock Exchanges.</p> <p>c) When a security is not traded on any stock exchange on a particular valuation day, the value at which it was traded on the National Stock Exchange or the Bombay Stock Exchange, as the case may be, on the earliest previous day may be used, provided such date is not more than thirty days prior to the valuation date.</p> <p>d) For Index Funds, valuation shall be done at the closing prices of the underlying index.</p>
	Non-Traded / Thinly Traded	<p>When a security (other than Futures & Options) is not traded on any Stock Exchange on a particular valuation day, the value at which it was traded (closing price) on the selected stock exchange or any other stock exchange shall be used, provided such day is not more than thirty days prior to the valuation date.</p>

Valuation of Non-Traded / Thinly Traded:

Thinly Traded: When trading in an equity/equity related security (such as convertible debentures, equity warrants, etc.) in a month is both less than Rs. 5,00,000 and the total volume is less than 50,000 shares, it shall be considered as a thinly traded security and valued accordingly. In order to consider a security as a thinly traded security, the volumes traded only on the NSE and the BSE shall be considered.

Where a security is identified as a "thinly traded" security by applying the above parameters for the preceding calendar month, the same will be valued by ITIAML as a thinly traded security.

If the share is not listed on the stock exchanges which provide such information, then it will be obligatory on the part of the Fund to make its own analysis in line with the above criteria to check whether such securities are thinly traded which would then be valued accordingly.

Further, thinly traded securities would be monitored on a calendar month basis and not on rolling basis. i.e. If a security in holding has been classified as thinly traded according to the criteria mentioned above, it would be fairly valued ignoring the primary and secondary stock exchange prices. This fair valuation would continue for the entire month even though, the volumes and value might have exceeded the limit in the current month.

In case trading in an equity security is suspended for trading on the stock exchange the last traded price would be considered for valuation of that security. If an equity security is suspended for trading for more than 30 days, then it would be considered as Non-Traded and valued accordingly.

Non-Traded: If the equity securities are not traded on the NSE or the BSE for a period of thirty days prior to the valuation date, the security must be treated as 'non-traded' security.

Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology
-------------	---	-----------------------

Non-traded securities of a company shall be valued "in good faith" on the basis of the valuation principles laid down below:

For equity shares:

- i) i) Net Worth per share = [Share Capital + Reserves (excluding Revaluation Reserves) – Misc. expenditure and Debit Balance in P&L A/c] divided by the No. of Paid up Shares. This shall be computed based on the latest available audited balance sheet.
- ii) Average capitalization rate (P/E ratio) for the industry based upon either BSE or NSE data (which should be followed consistently and changes, if any noted with proper justification thereof) shall be taken and discounted by 75% i.e. only 25% of the Industry average P/E shall be taken as capitalization rate (P/E ratio). Earnings per share (EPS) of the latest audited annual accounts will be considered for this purpose.
- iii) The net worth per share and the capital earning value calculated as above shall be averaged and further discounted by 15% for illiquidity so as to arrive at the fair value per share.
- iv) In case the EPS is negative, EPS value for that year shall be taken as zero for arriving at capitalized earning.
- v) In case where the latest balance sheet of the company is not available within nine months from the close of the year, unless the accounting year is changed, the shares of such companies shall be valued at zero.
- vi) In case an individual security accounts for more than 5% of the total assets of the Investment Strategy, an independent valuer shall be appointed for the valuation of the said security. To determine if a security accounts for more than 5% of the total assets of the Investment Strategy, it should be valued by the procedure above and the proportion which it bears to the total net assets of the Investment Strategy to which it belongs would be compared on the date of valuation

B. Preference shares:

Convertible preference shares would be valued based on the intrinsic value of the preference shares considering the conversion ratio as adjusted for illiquidity discount of 15% and other relevant factors as applicable as on the valuation date with the approval of the Valuation Committee.

Non-traded non-convertible redeemable preference shares, being similar to debt securities, valuation shall be on the same basis as is for debt instruments as approved by the Valuation Committee.

C. Convertible Debentures:

In respect of convertible debentures and bonds, the non-convertible and convertible portion would be valued separately. The non-convertible portion would be valued on the same basis as is applicable to a debt instrument. The convertible component would be valued based on the same basis as would be applicable to an equity instrument.

If after conversion, the resultant equity instrument would be traded pari-passu with an existing equity instrument which is traded, the value of the later instrument can be adopted after an appropriate discount for the non-tradeability of the instrument during the period preceding the conversion while valuing such instruments, the fact whether conversion is optional should also be factored in. The appropriate discount applied should be approved and factored in.

The value of the optional conversion shall be determined as follows:

- If the option to exercise rests with the issuer, the lower of the value when exercised or value when not exercised shall be taken.
- If the option to exercise rests with the investor, the higher of the value when exercised or value when not exercised shall be taken. The valuation shall be approved by the Valuation Committee.

Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology
Equity	Unlisted	<p>The equity shares of a company proposed to be listed shall be valued "in good faith" on the basis of the valuation principles laid down below:</p> <p>a) Based on the latest available audited balance sheet, Net Worth shall be calculated as the lower of the following:</p> <p>(i) Net worth per share = [Share capital + Free Reserves (excluding Revaluation reserves) - Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses] divided by the Number of Paid up Shares</p> <p>(ii) After taking into account the outstanding warrants and options, Net Worth per share shall again be calculated and shall be = [Share Capital plus consideration on exercise of Option and/or Warrants received/receivable by the Company plus Free Reserves (excluding Revaluation Reserves) minus Miscellaneous expenditure not written off or deferred revenue expenditure, intangible assets and accumulated losses] divided by {Number of Paid up Shares plus Number of Shares that would be obtained on conversion and/or exercise of Outstanding Warrants and Options}.</p> <p>The lower of (i) and (ii) above shall be used for calculation of Net Worth per share and for further calculation to arrive at the fair value per share as stated in (c) below:</p> <p>b) Average capitalisation rate (P/E ratio) for the industry based upon either BSE or NSE data (which shall be followed consistently and changes, if any, noted with proper justification thereof) shall be taken and discounted by 75% i.e. only 25% of the Industry average P/E shall be taken as capitalisation rate (P/E ratio). Earnings per share of the latest audited annual accounts will be considered for this purpose.</p> <p>c) The Net Worth value per share and the capital earning value calculated as above shall be averaged and further discounted by 15 per cent for illiquidity so as to arrive at the fair value per share. In effect, the Computation of fair value per share to be considered for valuation at 15 % discount for illiquidity is [(Net worth per share + Capitalized value of EPS) / 2] * 0.85</p> <p>The above valuation methodology shall be subject to the following conditions:</p> <p>a. All calculations shall be based on audited accounts.</p> <p>b. If the latest balance sheet of the company is not available within nine months from the close of the year, unless the accounting year is changed, the shares of such companies shall be valued at zero.</p> <p>c. If the Net Worth of the company is negative, the share would be marked down to zero.</p> <p>d. In case the EPS is negative, EPS value for that year shall be taken as zero for arriving at capitalised earning.</p> <p>e. In case an individual security accounts for more than 5 per cent of the total assets of the Investment Strategy, an independent valuer shall be appointed for the valuation of the said security. To determine if a security accounts for more than 5 per cent of the total assets of the Investment Strategy, it shall be valued in accordance with the procedure as mentioned above on the date of valuation.</p> <p>In order to ensure fair valuation, the valuation committee of the AMC may decide to value an unlisted security at a price lower than the value derived using the aforesaid methodology.</p>
Initial Public Offering (IPO)		Prior to allotment, application money is accounted in the Fund books of account at the bid price paid. No holding position is created, until confirmed allotment is received. Post allotment, while awaiting listing, it will be valued at allotment price.
Equity and equity related securities under lock-in period/ pending listing		These shall be valued based on the last quoted closing price of the security after applying suitable discount for liquidity. The Valuation Committee shall decide on the illiquidity discount to be applied on a case to case basis.

Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology
Rights" entitlement/partly paid up rights shares	Traded	If the rights are traded, then the traded price will be considered for valuation.
	Non-traded/Unlisted/ Thinly Traded	<p>a) a) Until they are traded, post the rights renunciation period, the value of the "rights" entitlement would be calculated as per the SEBI prescribed formula stated below:</p> $Vr = n/m * (Pex - Pof)$ <p>Where</p> <p>Vr = Value of Rights</p> <p>n = Number of rights offered</p> <p>m = Number of original shares held</p> <p>Pex = Ex-right price</p> <p>Pof = Rights Offer price</p> <p>Ratio of Rights i.e. (n/m where n = No. of Rights offered and m = No. of original shares held) will be adjusted in the quantity directly while booking the Rights and hence not considered again for valuation.</p> <p>b) Where the rights are not treated pari-passu with the existing shares, suitable adjustments would be made to the value of rights. Where it is decided not to subscribe for the rights but to renounce them and renunciations are being traded, the rights would be valued at the renunciation value.</p> <p>c) In case original shares on which the right entitlement accrues are not traded on the Stock Exchange on an ex-right basis, right entitlement should not be recognised as investments.</p> <p>d) Where right entitlements are not traded, and it was decided not to subscribe the rights, the right entitlements have to be valued at zero.</p> <p>e) Post payment of the subscription amount for the rights entitlement, it will be valued inline with the normal valuation methodology for valuation of equities.</p>
Partly Paid-up Equity Shares:	Traded	If the partly paid-up equity shares are traded in market separately then the same shall be valued at traded price (like any other equity instrument).
	Non - traded	<p>Uncalled liability per share shall be reduced from the value of fully paid share, if traded, to derive price of non-traded partly paid shares</p> <p>If the fully paid up shares are not traded, the valuation principles for valuing non-traded equity shares shall be followed for valuing the fully paid up on-traded shares (with suitable illiquidity discounts) and then reduced by the uncalled liability per share to arrive at the value of non- traded partly paid shares.</p>
	Thinly Traded	<p>Partly paid shares should be valued at the lower of the following two prices:</p> <ul style="list-style-type: none"> • Current closing price per share of fully paid up shares less uncalled amount per share of partly paid shares, and, • Closing price of the partly paid share if it has not been traded on any particular valuation day (not exceeding the last 30 days).
Shares tendered for Buyback	–	If a company offers to buy back hundred percent of the shares tendered, then shares will be valued at the price of buy back, if the shares are already tendered ignoring the market price. Else, market price of the security will be considered for valuation till the date of receipt of formal confirmation of acceptance of shares tendered under the buyback Investment Strategy.
Suspended Security	–	In case trading in an equity security is suspended for trading on the stock exchange the last traded price shall be considered for valuation of that security. Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology
Cash / Acquirer Offer	–	<p>If an Acquirer of an Investee Company offers to buy 100% of the shares tendered, then the shares will be valued at the offer price, if the shares are already tendered ignoring the market price. Else, market price of the security will be considered for valuation till the date of receipt of formal confirmation of acceptance of shares tendered under the offer.</p>
Valuation of Shares on Merger, De-merger and Other Corporate Action Events	–	<p>Merger: Valuation of merged entity would be arrived at by summation of previous day's value of the respective companies prior to merger divided by the entitled quantity of the merged entity in cases where identity of the entities getting merged is lost until the new entity is listed. E.g. If Company A and Company B merge to form a new Company C, then new company C would be valued at the previous day's value of A and B with appropriate adjustment for share swap ratio as indicated in the Investment Strategy of merger.</p> <p>In case of a merger where the identity of one entity continues, valuation of merged entity would be at the closing price of the surviving entity, after adjusting for share swap ratio.</p> <p>E.g. If Company A merges into Company B then merged entity would be valued at the price of Company B being the surviving Company, with no of shares adjusted for the swap ratio.</p> <p>De-merger:</p> <p>On de-merger following possibilities arise which influence valuation:</p> <p>Both the shares are traded immediately on de-merger: In this case, shares of both the Companies are valued at respective traded prices.</p> <p>Shares of only one company continued to be traded on de-merger: In case one entity is demerged into two or more entities and one of those entities continues to be listed, value of unlisted entity (ies) will be difference between the opening value of the security on the ex-date (after demerger) and closing value of the security on previous trading day (before demerger) that continues to be listed. The difference in value of two dates will be the valuation price of the unlisted entity (ies) proportionately, till they are listed and traded on a stock exchange. The cost price of new entity/entities would be derived proportionately from the cost price of parent entity and the same will be kept constant until listing.</p> <p>In case the value of the traded security of de-merged entity is equal to or in excess of the value of that entity before de-merger, then the security of the non-traded entity will be valued at zero.</p> <p>If the above securities remained unlisted for more than 3 months, illiquidity discount on the derived prices may be applied. Valuation committee will take decision regarding discount to be given on the basis of the market capitalization of the issuer at 3%, 5% and 10%, for Large cap, Mid cap, and Small cap respectively. Discount will be continued for next 6 months.</p> <p>However, if more than 9 months have elapsed from the date of corporate action and the security is still not listed, the same shall be valued at the higher discount as decided by the Valuation Committee on case to case basis.</p> <p>Both the shares are not traded on de-merger: The value of the shares of the Company one day prior to ex-date of de-merger will be bifurcated over the de-merged shares in the ratio of cost of shares of each demerged entity or on the basis of net assets transferred if the same is available from the Company and any other relevant factors.</p> <p>In case shares of both the companies are not traded for more than 3 months, these are to be treated as unlisted security the illiquidity discount on the derived prices may be applied. Valuation committee will take decision regarding discount to be given on the basis of the market capitalization of the issuer at 3%, 5% and 10%, for Large cap, Mid cap, and Small cap respectively. Discount will be continued for next 6 months.</p>

Asset Class	Traded / Not Traded / Thinly Traded/ Listed / Proposed to be listed	Valuation Methodology

In case the above methodology does not derive the fair valuation of de-merged entities; the same may be determined by the Valuation Committee on case to case basis.</p> <p>Other corporate action event:</p> <p>In case of any other type of capital corporate action event, the same shall be valued at fair price on case to case basis as may be determined by the Valuation Committee</p>
Stock and Index Derivatives	–	Equity / Index Options Derivatives and Equity / Index Futures Derivatives Future/option contracts shall be valued at the day end Settlement Price provided on the respective stock exchange.
Valuation of Warrants	Traded	If the warrants are traded, the traded price will be considered for valuation.
	Non-Traded	<p>Warrants can be valued at the value of the share which would be obtained on exercise of the warrant after applying appropriate discount per annum prorated on a monthly basis after reducing the exercise price / issuance price from the closing price of the underlying cash equity security.</p> <p>If the amount payable on exercise of the warrants is higher than the value of the share, the value of the warrants should be taken as zero.</p>

Identify a 'Put Trigger Date', a date on which 'price to put option' is the highest when compared with price to other put options and maturity price. ii. Identify a 'Call Trigger Date', a date on which 'price to call option' is the lowest when compared with price to other call options and maturity price. iii. In case no Put Trigger Date or Call Trigger Date ('Trigger Date') is available, then valuation would be done to maturity price. In case one Trigger Date is available, then valuation would be done as to the said Trigger Date. In case both Trigger Dates are available, then valuation would be done to the earliest date.

ANNEXURE II

WATERFALL APPROACH FOR VALUATION OF MONEY MARKET AND DEBT SECURITIES:

As per SEBI guidelines on valuation of money market and debt securities, a waterfall approach shall be followed by the valuation agencies for arriving at security level pricing. AMFI, in consultation with SEBI, has issued detailed guidelines on waterfall approach for valuation of money market and debt securities vide AMFI Best Practice Circular No.83 / 2019-20 dated November 18, 2019.

The broad principles of the said waterfall approach, for arriving at the security level prices are as follows:

- i. Volume Weighted Average Yield (VWAY) of primary reissuances of the same ISIN (whether through book building of fixed price) and secondary trades in the same ISIN
- ii. VWAY of primary issuances through book building of same issuer; similar maturity (Refer Note 1 below)
- iii. VWAY of secondary trades of same issuer, similar maturity
- iv. VWAY of primary issuances through fixed price auction of same issuer, similar maturity
- v. VWAY of primary issuance through book building of similar issuer, similar maturity (Refer note 1 below)
- vi. VWAY of secondary trades of similar issuer, similar maturity
- vii. VWAY of primary issuance through fixed price auction of similar issuer, similar maturity
- viii. Construction of matrix (polling may also be used for matrix construction)
- ix. In case of exceptional circumstances, polling for security lever valuation (Refer note 2 below)

Note 1: Except for primary issuance through book building, polling shall be conducted to identify outlier trades. However, in case of any issuance through book building which is less than INR 100 Cr, polling shall be conducted to identify outlier trades.

Note 2: Some examples of exceptional circumstances would be stale spreads, any event/news in particular sector/issuer, rating changes, high volatility, corporate action of such other event as may be considered by valuation agencies. Here stale spreads are defined as spreads of issuer which were not reviewed/ updated through trades/primary/polls in same or similar security/issuers of same/similar maturities in waterfall approach in last 6 months.

Further, the exact details and reasons for the exceptional circumstances which led to polling shall be documented and reported to AMCs. Further, a record of all such instances shall be maintained by AMCS and shall be subject to verification during SEBI inspections.

Note 3: All trades on stock exchanges and trades reported on trade reporting platforms till end of trade reporting time (excluding inter- Investment Strategy transfers) should be considered for valuation on that day.

Note 4: It is understood that there are certain exceptional events, occurrence of which during market hours may lead to significant change in the yield of the debt securities. Hence, such exceptional events need to be factored in while calculating the price of the securities. Thus, for the purpose of calculation of VWAY of trades and identification of outliers, on the day of such exceptional events, rather than considering whole day trades, only those trade shall be considered which have occurred post the event (on the same day).

The following events would be considered exceptional events

- i. Monetary / Credit Policy
- ii. Union budget
- iii. Government Borrowing / Auction Days

- iv. Material Statements on Sovereign Rating
- v. Issuer of Sector Specific events which have a material impact on yields
- vi. Central Government Election Days
- vii. Quarter end days

In addition to the above, valuation agencies may determine any other event as an exceptional event. All exceptional events along-with valuation carried out on such dates shall be documented with adequate justification.

Definition of tenure buckets for Similar Maturity

When a trade in the same ISIN has not taken place, reference should be taken to trades of either the same issuer or similar issuer, where the residual tenure matches the tenure of the bond to be priced. However, as it may not be possible to match the exact tenure, it is proposed that tenure buckets are created and trades falling within such similar maturity be used as per table below:

Residual Tenure of Bond to be priced	Criteria for similar maturity
Upto 1 month	Calendar Weekly Bucket
Greater than 1 month to 3 months	Calendar Fortnightly Bucket
Greater than 3 months to 1 year	Calendar Monthly Bucket
Greater than 1 year to 3 years	Calendar Quarterly Bucket
Greater than 3 years	Calendar Half Yearly or Greater Bucket

In addition to the above:

- a. In case of market events, or to account for specific market nuances, valuation agencies may be permitted to vary the bucket in which the trade is matched or to split buckets to finer time periods as necessary. Such changes shall be auditable. Some examples of market events/ nuances include cases where traded yields for securities with residual tenure of less than 90 days and more than 90 days are markedly different even though both may fall within the same maturity bucket, similarly for less than 30 days and more than 30 days or cases where yields for the last week v/s second last week of certain months such as calendar quarter ends can differ.
- b. In the case of illiquid/ semi liquid bonds, it is proposed that traded spreads be permitted to be used for longer maturity buckets (1 year and above). However, the yields should be adjusted to account for steepness of the yield curve across maturities.
- c. The changes / deviations mentioned in clauses a and b, above, should be documented, along with the detailed rationale for the same. Process for making any such deviations shall also be recorded. Such records shall be preserved for verification.

3. Process for determination of similar issuer

Valuation agencies shall determine similar issuers using one or a combination of the following criteria. Similar issuer do not always refer to issuers which trade at same yields, but may carry spreads amongst themselves & move in tandem or they are sensitive to specific market factor/s hence warrant review of spreads when such factors are triggered.

- i. Issuers within same sector/industry and/or
- ii. Issuers within same rating band and/or
- iii. Issuers with same parent/ within same group and/or
- iv. Issuers with debt securities having same guarantors and/or

v. Issuers with securities having similar terms like Loan Against Shares (LAS)/ Loan Against Property (LAP)

The above criteria are stated as principles and the final determination on criteria, and whether in combination or isolation shall be determined by the valuation agencies. The criteria used for such determination should be documented along with the detailed rationale for the same in each instance. Such records shall be preserved for verification. Similar issuers which trade at same level or replicate each other's movements are used in waterfall approach for valuations. However, similar issuer may also be used just to trigger the review of spreads for other securities in the similar issuer category basis the trade/news/action in any security/ies within the similar issuer group.

4. Recognition of trades and outlier criteria

i. **Volume criteria for recognition of trades (marketable lot)**

Chapter 9 of SEBI Master Circular dated June 27, 2024, on Valuation of money market and debt securities, prescribes that the marketable lots shall be defined by AMFI, in consultation with SEBI. In this regard, marketable lot is defined as under. The following volume criteria shall be used for recognition of trade by valuation agencies:

Parameter	Minimum Volume Criteria for marketable lot
Primary	INR 25 cr for both Bonds/NCD/CP/CD and other money market instruments
Secondary	INR 25 cr for CP/CD, T-Bills and other money market instruments
Secondary	INR 5 cr for Bonds/NCD/G-secs

Trades not meeting the minimum volume criteria i.e. the marketable lot criteria as stated above shall be ignored.

ii. **Outlier criteria**

It is critical to identify and disregard trades which are aberrations, do not reflect market levels and may potentially lead to mispricing of a security or group of securities. Hence, the following broad principles would be followed by valuation agencies for determining outlier criteria.

- Outlier trades shall be classified on the basis of liquidity buckets (Liquid, Semi- liquid, Illiquid). Price discovery for liquid issuers is generally easier than that of illiquid issuers and hence a tighter pricing band as compared to illiquid issuers would be appropriate.
- The outlier trades shall be determined basis the yield movement of the trade, over and above the yield movement of matrix. Relative movement ensures that general market movements are accounted for in determining trades that are outliers. Hence, relative movement over and above benchmark movement shall be used to identify outlier trades.
- Potential outlier trades which are identified through objective criteria defined above will be validated through polling from market participants. Potential outlier trades that are not validated through polling shall be ignored for the purpose of valuation.
- The following criteria shall be used by valuation agencies in determining Outlier Trades:

Liquidity classification	BPS criteria (Yield movement over Previous Day yield after accounting for yield movement of matrix)		
	Upto 15 days	15-30 days	Greater than 30 days
Liquid	30 bps	20 bps	10 bps
Semi-liquid	45 bps	35 bps	20 bps
Illiquid	70 bps	50 bps	35 bps

The above criteria shall be followed consistently and would be subject to review on a periodic basis by valuation agencies and any change would be carried in consultation with AMFI.

- In order to ensure uniform process in determination of outlier trades the criteria for liquidity classification shall be as detailed below.

Liquidity classification criteria liquid semi – Liquid, semi-liquid and Illiquid definition

Valuation agencies shall use standard criteria for classifying trades as Liquid, Semi - liquid and illiquid basis the following two criteria

- Trading volume
- Spread over reference yield

Such criteria shall be reviewed on periodic basis in consultation with AMFI.

Trading volume (Traded days) based criteria:

Number of unique days an issuer trades in the secondary market or uses a new security in the primary market in a calendar quarter

- Liquid-> $\geq 50\%$ of trade days
- Semi liquid-> $\geq 10\%$ to 50% trade days
- Illiquid-> $< 10\%$ of trade days

Spread based criteria:

Spread over the matrix shall be computed and based on thresholds defined, issuers shall be classified as liquid, semi liquid and illiquid. For bonds thresholds are defined as up to 15 bps for liquid; >15-75 bps for semi-liquid;

>75bps for illiquid. (Here, spread is computed as average spread of issuer over AAA Public Sector Undertakings/ Financial Institutions/Banks matrix), For CP/CD - upto 25 bps for liquid; >25-50 bps for semi liquid; >50bps for illiquid. (Here, spread is computed as average spread of issuer over A1+/AAA CD Bank matrix).

The thresholds shall be periodically reviewed and updated having regard to the market.

The best classification (liquid being the best) from the above two criteria (trading volume and spread based) shall be considered as the final liquidity classification of the issuer. The above classification shall be carried out separately for money market instruments (CP/CDs) and bonds.

5. Process for construction of spread matrix

Valuation agencies shall follow the below process in terms of calculating spreads and constructing the matrix:

Steps	Detailed Process
Step 1	<p>Segmentation of corporates-</p> <p>The entire corporate sector is first categorised across following four sectors i.e. all the corporates will be catalogued under one of the below mentioned bucket:-</p> <ol style="list-style-type: none"> 1. Public Sector Undertakings/ Financial Institutions/ Banks; 2. Non-banking Finance Companies - except Housing Finance Companies; 3. Housing Finance Companies; <p>Other Corporates</p>
Step 2	<p>Representative issuers-</p> <p>For the aforesaid 4 sectors, representative issuers (Benchmark Issuers) shall be chosen by the valuation agencies for only higher rating (i.e. "AAA" or AA+) Benchmark/Representative issuers will be identified basis high liquidity, availability across tenure in AAA/ AA+ category and having lower credit/ liquidity premium. Benchmark issuers can be single or multiple for each sector.</p> <p>It may not be possible to find representative issuers in the lower rated segments, however in case of any change in spread in a particular rating segment, the spreads in lower rated segments should be suitably adjusted to reflect the market conditions. In this respect, in case spreads over benchmark are widening at a better rated segment, then adjustments should be made across lower rated segments, such that compression of spread is not seen at any step. For instance, if there is widening of spread of AA segment over the AAA benchmark, then there should not be any compression in spreads between AA and A rated segment and so on..</p>
Step 3	<p>Calculation of benchmark curve and calculation of spread-</p> <ol style="list-style-type: none"> 1. Yield curve to be calculated for representative issuers for each sector for maturities ranging from 1 month till 20 years and above. 2. Waterfall approach as defined in Part A(1) above will be used for construction of yield curve of each sector. 3. In the event of no data related to trades/ primary issuances in the securities of the representative issuer is available, polling shall be conducted from market participants. 4. Yield curve for Representative issuers will be created on daily basis for all 4 sectors. All other issuers will be pegged to the respective benchmark issuers depending on the the sector, parentage and characteristics. Spared over the benchmark curve for each security is computed using latest available trades/ primaries/polls for respective maturity bucket over the Benchmark Issuer. 5. Spreads will be carried forward in case no data points in terms of trades/ primaries/ polls are available for any issuer and respective benchmark movement will be given.

Step 4	<ol style="list-style-type: none"> 1. The principles of VWAY, outlier trades and exceptional events shall be applicable while constructing the benchmark curve on the basis of trades/ primary issuances. 2. In case of rating downgrade/credit event/ change in liquidity or any other material event in Representative issuers, new Representative issuers will be identified. Also, in case there are two credit ratings, the lower rating to be considered. 3. Residual tenure of the securities of representative issuers shall be used for construction of yield curve.
--------	--

Part B: Valuation of G-Secs (T-Bill, Cash management bills, G-sec and SDL)

The following is the waterfall mechanism for valuation of Government securities:

- VWAY of last one-hour subject to outlier validation
- VWAY for the day (including a two quote, not wider than 5 bps on NDSOM), subject to outlier validation
- Two quote, not wider than 5 bps on NDSOM, subject to outlier validation
- Carry forward of spreads over the benchmark
- Polling etc. Note:
 1. VWAY shall be computed from trades which meet the marketable lot criteria stated in Part A of these Guidelines.
 2. Outlier criteria: Any trade deviating by more than +/- 5 bps post factoring the movement of benchmark security shall be identified as outlier. Such outlier shall be validated through polling for inclusion in valuations. If the trades are not validated, such trades shall be ignored.

G. EXCEPTIONAL EVENTS

In case an AMC decides to deviate from the valuation price given by the valuation agencies, the detailed rationale for each instance of deviation shall be recorded by the AMC.

The rationale for deviation along-with details such as information about the security (ISIN, issuer name, rating etc.), price at which the security was valued vis-a-vis the price as per the valuation agencies and the impact of such deviation on Investment Strategy NAV (in amount and percentage terms) shall be reported to the Board of AMC and Trustee Company.

The rationale for deviation along-with details shall also be disclosed immediately and prominently, under a separate head on the website of AMC. Further, while disclosing the total number of instances of deviation in the monthly and half-yearly portfolio statements, AMCs shall also provide the exact link to their website for accessing the information.

Annexure – III

Valuation of AT-1 Bonds and Tier II Bonds Valuation

I. Deemed Residual Maturity of Bonds

Deemed Residual Maturity for the Purpose of Calculation of valuation as well as Macaulay Duration for existing as well as new perpetual bonds issued under Basel III framework will be as under:

Time Period	Deemed Residual Maturity of Basel III AT-1 Bonds (years)	Deemed Residual Maturity of Basel III Tier 2 Bonds (years)
Till March 31, 2022	10	10 years or contractual maturity whichever is earlier
April 01, 2022 – September 31, 2022	20	Contractual maturity
October 01, 2022 – March 31, 2023	30	Contractual maturity
March 31, 2023 onwards	100*	Contractual maturity

* 100 years from the date of the issue of the bond

the residual maturity will always remain above the deemed residual maturity proposed above.

Macaulay Duration shall be calculated based on the deemed residual maturity as mentioned above:

1. If the issuer does not exercise call option for any ISIN, then maturity of bonds to be considered as 100 years from the date of issuance of AT-1 bonds and contractual maturity of Tier II Bonds for all the ISINs of the said issuer for the purpose of valuation and calculation of Macaulay Duration.
2. If the non-exercise of call option is due to financial stress or if there is any adverse news, the same must be reflected in the valuation.

II. Guidelines for Valuation

1. Form two types of ISINs:

- a) Benchmark ISINs (a non-benchmark ISIN can be linked to only one benchmark ISIN. Currently, SBI ISINs happens to be the benchmark ISINs across all maturities for AT-1 Bonds.)
- b) Non-benchmark ISINs (Will be divided into multiple groups based on similar issuer and similar maturity).

2. Take a look back period for trade recognition as under:

- a) 15 working days for benchmark ISINs
- b) 30 working days for non-benchmark ISINs
- c) This is revised to 7 working days for benchmark ISIN and 15 working days for non-benchmark ISINs from October 01, 2021.

Note 1

- a) If the ISIN gets traded, the traded YTM will be taken for the purpose of valuation.
- b) If 1 ISIN of the issuer trades, all other ISINs of issuers will be considered as traded but with necessary adjustment of spread to YTM.
- c) If none of the ISIN of the issuer gets traded, the trade of similar issuer in the group will be taken to valuation however with necessary adjustment of spread to YTM of similar issuer similar maturity. If none of the ISIN in a group gets traded on any particular day, an actual trade in a look back period will be seen.
- d) If there is an actual trade in look back period the security will be considered as traded and valued with necessary adjustment of spread to YTM. According to this valuation will be done based on the trade of issuer, trade of similar issuer and as an additional layer a look back period of is requested. It is

confirmed that spread over YTM will be taken without any adjustment of modified duration to call.

Note 2

As the valuation is based on trade during the look back period, it is confirmed that a spread will be adjusted to reflect adverse news, change in credit rating, interest rate etc., which has bearing on the yield of ISIN being valued.

Note 3

If there is no actual trade of any ISIN of the issuer as well as similar issuer during look back period also, then valuation will be done by taking spread over matrix and/or polling in line with the waterfall mechanism prescribed by AMFI.

Note 4

AT-1 bonds and Tier 2 bonds being different categories of bonds, the valuation of these bonds will be done separately (i.e.) ISIN of AT-1 bond traded will not mean that ISIN of Tier-2 bonds of the same issuer have also traded. However, if any issuer does not exercise call option for any ISIN, then the valuation and calculation of Macaulay Duration should be done considering maturity of 100 years from the date of issuance for AT-1 Bonds and Contractual Maturity for Tier 2 bonds, for all ISINs of the issuer.

Annexure – IV

Upfront Fees on Trade

1. Upfront fees on all trade (including primary market trades), by whatever name and manner called, would be considered by the valuation agencies for the purpose of valuation of the security.
2. Details of such upfront fees should be shared by the AMCs on the trade date to the valuation agencies as part of the trade reporting to enable them to arrive at the fair valuation for that date.
3. For the purpose of accounting, such upfront fees should be reduced from the cost of the investment in the Investment Strategy that made the investment.
4. In case upfront fees are received across multiple Investment Strategy(s), then such upfront fees should be shared on a pro-rata basis across such Investment Strategy(s).

V. COMPUTATION OF NAV

A. Policy of computation of NAV

NET ASSET VALUE (NAV) AND VALUATION OF INVESTMENT

The Net Asset Value (NAV) per unit of the Investment Strategy for each option will be computed by dividing the net assets of the Investment Strategy by the number of units outstanding on the valuation day. The AMC will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of the Units under the Investment Strategy will be calculated on a daily basis as shown below:

$$\begin{aligned}
 & \text{Market or Fair Value of the} \\
 & \text{Investment Strategy's Investments} \\
 & + \text{Current Assets} - \text{Current} \\
 & \text{Liabilities and Provisions} \\
 \text{NAV per Unit (Rs.)} & = \frac{\text{Market or Fair Value of the} \\
 & \text{Investment Strategy's Investments} \\
 & + \text{Current Assets} - \text{Current} \\
 & \text{Liabilities and Provisions}}{\text{No. of Units outstanding under} \\
 & \text{Investment Strategy/Option on the} \\
 & \text{valuation day}}
 \end{aligned}$$

Notes:

The NAV shall be calculated up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the IDCW Option will be different after the declaration of the first IDCW. The AMC will calculate and disclose the NAVs for all the business days.

Rounding off policy for NAV:

To ensure uniformity, the AMC shall round off NAVs up to four decimal places.

The fourth decimal will be rounded off to the next higher digit if the fifth decimal is or more than 5 i.e., if the NAV is Rs.1000.13745 it will be rounded off to Rs.1000.1375.

Illustration:

Assumptions - on the day of calculation of NAV:

Market or Fair Value of the Investment Strategy's Investments = 10600 Current Assets = 250

Current Liabilities & provisions = 150

No of units outstanding in the plan = 1000

10.7000 = 10600+250-150

1000

The provisions of applicability of NAV and allotment of units in case of Direct Plan will be as are currently applicable for the Regular Plan.

As required under the Regulations, the fund shall ensure that the repurchase price of an open-ended Investment Strategy is not lower than 95% of the Net Asset Value.

B. Policy for computation of NAV in foreign securities

Currently, none of the Investment Strategy invest in foreign securities. However, if investment in foreign securities are made in future, the same will be as per guidelines issued by the SEBI and Reserve Bank of India ("RBI") time to time.

C. Procedure in case of delay in disclosure of NAV

The AMC shall update the NAVs on the website of Association of Mutual Funds in India -AMFI (www.amfiindia.com) by 11.00 p.m. or such other time as may be mandated by SEBI, on a daily basis. In case of any delay, the reasons for such delay will be explained to AMFI and, if so mandated, SEBI, by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund will be able to publish the NAVs.

The IT Act is amended every year by the Finance Act of the relevant year. No assurance can be given that future legislation, administrative rulings or court decisions will not significantly modify the conclusions set forth in this summary, possibly with retroactive effect.

The basis of charge of Indian income-tax depends upon the residential status of the taxpayer during a tax year, as well as the nature of the income earned. The Indian tax year runs from April 1 of every year to March 31 of the subsequent year, known as financial / assessment year. A person who is an Indian tax resident is liable to taxation in India on worldwide income, subject to certain tax exemptions / relaxations / deductions, which are available under the IT Act. A person who is treated as non-resident for tax purposes is generally subject to tax in India only on such person's Indian-sourced income.

Summary of income tax implications / compliances applicable:

I. TO THE SIF:

1. The entire income of the mutual fund registered under the Securities and Exchange Board of India Act, 1992 ("SEBI Act, 1992") or any Regulations made thereunder is exempt from income-tax in accordance with the provisions of Section 10(23D) of the IT Act.
2. The income received by the mutual fund is not liable for deduction of income-tax at source as per the provisions of Section 196(iv) of the IT Act. However, where the mutual fund receives any income from investments made in overseas jurisdiction, it may be subject to withholding in the relevant jurisdiction from which the income is received. As the income of the mutual fund is exempt from tax in India, credits / refunds in respect of such foreign taxes may not be available in India. However, it's important to note that while the mutual fund itself may not be able to claim these credits, there can be implications for the individual investors in the fund. Some tax treaties between India and other countries may allow individual investors to claim credits for taxes paid in foreign jurisdictions, but this would depend on the specific circumstances and applicable laws.

3. Withholding tax and GST on Management fees payable to investment manager (AMC)

Fees paid / payable by the fund to the AMC will be subject to with-holding taxes at 10%. Further, presently, the AMC is required to charge Goods and Service Tax (GST) @18% on such fees.

4. Withholding tax on other expense payments

Fund will be liable to withhold taxes at applicable rates on various expenses incurred by the Fund (e.g.: custodian fees, registrar fees, audit fees, etc.)

5. Statement of Financial Transaction

As per Section 285BA of the IT Act, a trustee of a mutual fund or such other person managing the affairs of the mutual fund is required to file a Statement of Financial Transactions ('SFT') furnishing details of receipts from any person of an amount aggregating to Rs. 10 lakh or more in a financial year for acquiring units of one or more Investment Strategy(s) of the Mutual Fund.

II. TO THE UNIT HOLDERS:

A. Deduction from total income

1. Under Section 80C of the IT Act, an assessee, being an individual or HUF opting for old tax regime, is eligible to claim a deduction of upto an aggregate of Rs. 1,50,000/- on account of sums paid as subscription to units of an Equity Linked Savings Investment Strategy ("ELSS"). The expression, "ELSS" refers to a Investment Strategy issued in terms of the Equity Linked Savings Investment Strategy, 2005, as notified by the Central Board of Direct Taxes ("CBDT"), Ministry of Finance, vide notification dated November 3, 2005 as amended vide notification dated December 13, 2005.

Further, a new/default tax regime for the taxpayers like individual and HUF is provided, where taxpayers are given an option to pay taxes at a concessional rate (as per new slab rates) from FY 2020-21 onwards. Any individual/ HUF opting for such the new/default tax regime from FY 2020-21 or onwards will have to discharge taxes on income

at the concessional rate/ new slab rates prescribed by forgoing specified exemptions and deductions (i.e. house rent allowance, deduction under Chapter VI-A other than the provisions of section 80CCD(2) and section 80JJAA of the IT Act,) and satisfaction of certain conditions. Thus, individual or HUF opting for new/ default tax regime shall not be entitled to deduction under section 80C of the IT Act as referred in clause no. 1 above.

2. For the purpose of computing the eligible deduction under section 80C of the IT Act under the old tax regime, the total income of the assessee shall be reduced by capital gains taxable at special tax rates viz. long-term capital gains taxable u/s. 112A and 112 of the IT Act and short-term capital gains taxable u/s. 111A of the IT Act.

B. Securities Transaction Tax

1. Under Chapter VII of Finance (No. 2) Act, 2004, the Unit holder is liable to pay a Securities Transaction Tax ("STT") in respect of taxable securities transactions, at the applicable rates. Taxable securities transactions include sale of units of an equity oriented fund entered into on the stock exchange or sale of units of an equity oriented fund back to the mutual fund (redemption).
2. The purchaser of the units of an equity oriented fund is not liable to pay STT, in case i) the purchase transaction is entered into on a recognised stock exchange and the contract for the purchase of such units is settled by the actual delivery or transfer of such units or ii) purchase of units from the Mutual Fund.
3. The seller of the units of an equity oriented fund is liable to pay STT at 0.001%, where the sale is entered into on a recognised stock exchange and the contract for sale of such units is settled by the actual delivery or transfer of such units.
4. At the time of the sale of units of an equity oriented fund to the mutual fund, the seller is required to pay STT @ 0.001%.

STT is not applicable on purchase / sale / redemption of units other than units of an equity oriented fund.

5. In case of investor who is engaged in the business, the STT paid during the year in respect of taxable securities transactions entered in the course of business is generally allowed as deduction under Section 36(1)(xv) of the IT Act, subject to the condition that such income from taxable securities transactions is included under the head, "profits and gains of business or profession".
6. However, STT is not deductible for the computation of capital gains, if the gains on sale of securities are considered to be in the nature of capital gains.

C. Stamp Duty

1. Pursuant to Notification No. S.O. 4419(E) dated December 10, 2019 read with Notification No. S.O. 115(E) dated January 08, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, read with Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019, a stamp duty @0.005% of the transaction value would be levied on mutual fund transactions (including transactions carried through stock exchanges and depositories for units in demat mode), with effect from July 1, 2020.
2. Accordingly, pursuant to levy of stamp duty, the number

of units allotted on purchase transactions (including Reinvestment of IDCW and transfers of IDCW) to the unitholders would be reduced to that extent.

3. Further, with effect from July 1, 2020, stamp duty shall be applicable at the rate of 0.015% on the consideration amount stated in the transfer instrument for off market transfer of units held in demat mode as well units held in physical mode.

D. Capital Gains or Business Income on transfer/redemption of units

Gains arising on transfer / redemption of units as well as switching between Investment Strategy(s) will be chargeable to tax under the IT Act. The characterization of income from investment in securities as "business income" or "capital gains" should be examined on a case-to-case basis. In this regard, the Circular No. 4/2007, dated June 15, 2007, and Circular no. 6/2016 dated 29 February 2016 issued by Central Board of Direct Taxes (CBDT) may be referred to.

E. LONG TERM CAPITAL GAINS

1. In case of units of Equity Oriented Fund, including ELSS

- i. Capital gains arising on transfer or redemption of units of an equity oriented fund shall be regarded as long-term capital gains if such units are held for a period of more than 12 months, immediately preceding the date of transfer.
- ii. In case of ELSS, the units are subject to a lock-in of 3 years. Accordingly, any sale of units after such lock-in will qualify as long-term capital gains.

With effect from 1 April 2018, long term capital gain above Rs. 1 lakh earned on transfer of listed equity shares and units of equity-oriented fund, which are covered by provisions of Section 112A of the IT Act, shall be taxable at 10% (plus surcharge and health and education cess) where such transfer is subject to STT.

- iii. However, the benefit of the computation of gains in foreign currency and cost inflation index shall not be available on such gains.
- iv. For equity-oriented mutual funds units purchased before February 1, 2018, the cost of acquisition of units of equity oriented mutual fund shall be higher of:

- Actual cost of acquisition; and
- Lower of:
 - a. Fair market value as on 31 January 2018; and
 - b. Value of consideration received upon transfer

For this purpose, "fair market value" shall mean:

- (i) in a case where the capital asset (viz. equity-oriented mutual fund units) are listed on any recognized stock exchange as on the 31 January, 2018, the highest price of the capital asset quoted on such exchange on the said date. Provided that where there is no trading in such asset on such exchange on the 31 January, 2018, the highest price of such asset on such exchange on a date immediately preceding the 31st day of January, 2018 when such asset was traded on such exchange shall be the fair market value;
- (ii) in a case where the capital asset is a unit which is not listed on a recognised stock exchange as on the 31 January, 2018, the net asset value of such unit as on the said date.

2. In case of units, other than units of Equity Oriented

Fund

- i. Capital gains arising on transfer or redemption of units other than units of an equity oriented fund should be regarded as long term capital gains, if such units are held for a period of more than 36 months immediately preceding the date of such transfer.
- ii. As per Section 112 of the IT Act, tax on income on long term capital gains arising from the transfer of units other than units of an equity-oriented fund shall be taxable at the rate of 20% plus applicable surcharge and health and education cess @ 4% on the amount of tax and surcharge, on the long-term capital gain computed after claiming indexed cost of acquisition in place of the cost of acquisition.
- iii. Furthermore, long-term capital gains in the case of non-residents would be taxable @ 10% on the transfer of capital assets, being unlisted securities, computed without giving effect to the first and second proviso of section 48 i.e. without taking benefit of foreign currency fluctuation and cost indexation benefit.
- iv. The benefit of indexation will, however, not be available to specified Offshore Fund, which is taxable @10% plus applicable surcharge and health and education cess @4% on the amount of tax and surcharge in terms of section 115AB of the IT Act.
- v. The benefit of indexation will also not be available to FPIs, who are taxed under Section 115AD of the IT Act @10% (plus applicable surcharge and health and education cess).
- vi. In cases where the taxable income as reduced by long-term capital gains of a resident individual or HUF is below the taxable limit, the long-term capital gain will be reduced to the extent of such shortfall and only the balance long-term capital gain will be chargeable to Income-tax.
- vii. However, the Finance Act, 2023 has introduced section 50AA in the IT Act which provides for computation of capital gains in relation to unit of a Specified Mutual Fund acquired on or after the 1 April 2023. The 'specified mutual fund' means a mutual fund where not more than thirty five per cent of its total proceeds is invested in the equity shares of domestic companies. The gain so computed shall be deemed to be capital gains arising from transfer of a short-term capital asset irrespective of the holding period and as such the benefit of long term capital gains are not available in respect of such units. Further, no deduction shall be allowed in computation of income in respect of any sums paid on account of Securities transaction tax (STT).

3. **Exemption from long-term capital gains**
- i. Under Section 54F(1) of the IT Act, **subject to the conditions specified therein**, in the case of an individual or a HUF, capital gains arising on transfer of a long term capital asset (not being a residential house) are not chargeable to tax if the entire net consideration received on such transfer is invested within the prescribed period in one residential house in India.
- ii. To avail this exemption, the investor should not own more than one residential house in addition to the proposed new residential house for which exemption is sought to be claimed. If part of such net consideration is invested within the prescribed period in one residential house, then such gains would not be chargeable to tax on a proportionate basis. For this purpose, net consideration means full value

of the consideration received or accruing as a result of the transfer of the capital asset as reduced by any expenditure incurred wholly and exclusively in connection with such transfer.

iii. However, the Finance Act, 2023 has amended the provisions of Section 54F providing that cost of the new residential house in excess of INR 10 crores shall be ignored for the purpose of calculation of deduction u/s. 54F. Thus, any investment exceeding INR 10 crores shall not be taken into account while determining the exemption available under section 54F of the IT Act.

1. In case of Equity Oriented Fund

i. Short-term capital gains arising from transfer of units of an equity oriented fund being subjected to STT will be charged to tax under section 111A of the IT Act @ 15% (plus applicable surcharge and health and education cess). The mutual fund will recover STT from the unit holder at the applicable rates when the units are repurchased by the mutual fund / redeemed by the investor.

ii. In cases where the taxable income as reduced by short term capital gains taxable u/s. 111A as aforesaid of a resident individual and HUF is below the taxable limit, the short term capital gain will be reduced to the extent of such shortfall and only the balance short term capital gain will be chargeable to income tax.

iii. Short-term capital gains are taxed at the normal rates applicable to each unit holder.

G. Business Income

1. Where units of the mutual fund are regarded as business asset, any gain arising from the transfer / redemption of units would be taxed under the head "Profits and Gains of Business or Profession", under Section 28 of the IT Act. 2. The following provisions would apply in case of consolidation of mutual fund Investment Strategy(s).
 - i. As per section 47(xviii) of the IT Act, any transfer of units held by the investor (held as a capital asset) in the consolidating Investment Strategy of the mutual fund in consideration of allotment of units in the consolidated Investment Strategy, shall not to be regarded as a taxable transfer, provided that the consolidation is of two or more Investment Strategy(s) of an equity oriented fund or two or more Investment Strategy(s) of a fund other than equity oriented fund.
 - ii. Further, as per section 49(2AD) of the IT Act, the cost of acquisition of units in the consolidated Investment Strategy shall be deemed to be the cost of acquisition of the units in the consolidating Investment Strategy. Also, as

per section 2(42A) of the IT Act, the period of holding of the units in the consolidated Investment Strategy shall include the period of holding of the units in the consolidating Investment Strategy.

3. "Consolidating Investment Strategy" has been defined under section 47(xviii) of the IT Act as the Investment Strategy of a mutual fund which merges under the process of consolidation of the Investment Strategy(s) of mutual fund in accordance with the SEBI (Mutual Funds) Regulations, 1996. "Consolidated Investment Strategy" has been defined as the Investment Strategy with which the consolidating Investment Strategy merges or which is formed as a result of such merger.

K. Consolidation of plans within a Investment Strategy of a mutual fund

1. In case of consolidation of mutual fund plans within a Investment Strategy, the investors generally receive units in the consolidated plan in consideration of units held in the consolidating plan.
2. As per section 47(xix) of the IT Act, any transfer of units (held by the investor as a capital asset) on account of a consolidation of a plan with other plans of the same Investment Strategy shall not be regarded as a taxable transfer.

As per the SEBI circular, all the existing unit holders in the affected Investment Strategy as on the day of the credit event shall be allotted equal number of units in the segregated portfolio as held in the main portfolio. Accordingly, on segregation, the unit holders hold same number of units in two Investment Strategy(s) – the main Investment Strategy and segregated Investment Strategy.
2. Explanation 1 to Section 2(42A) of the Act relating to the period of holding provides that the period of holding of the units of the segregated Investment Strategy shall include the period for which the units in the main Investment Strategy were held by the assessee.
3. Similarly, sub-section (2AG) is inserted in section 49 of the Act to provide that the cost of acquisition of a unit or units in the segregated portfolio shall be the amount which bears to the cost of acquisition of a unit or units held by the assessee in the total portfolio, the same proportion as the net asset value of the asset transferred to the segregated portfolio bears to the net asset value of the total portfolio

immediately before the segregation of portfolios.

Also, sub-section (2AH) of section 49 of the Act provides that the cost of the acquisition of the original units held by the unit holder in the main portfolio shall be deemed to have been reduced by the amount so arrived at under sub-section (2AG) of section 49 of the Act.

4. Separately, the provisions of the Act are silent on the tax neutrality of receipt of units of segregated portfolio. However, arguably, segregation of portfolio does not result in transfer as the investor continues to hold units of main portfolio and segregated portfolio

M. Minimum Alternate Tax (MAT) / Alternate Minimum Tax (AMT)

Q. Switching between Investment Strategy(s)

Switching from one Investment Strategy to another Investment Strategy of a Mutual Fund switching from one Investment Strategy to another Investment Strategy of a Mutual Fund will be effected by way of redemption of units of the relevant Investment Strategy and reinvestment of the redemption proceeds in the other Investment Strategy selected by the Unit holder. Hence switching between the Investment Strategy(s) will attract the same implications as applicable on transfer of such units.

Term: The tax implications will depend on whether the units being switched out are held for a short-term or long-term period.

Capital Gain: If there's a gain on the switched-out units, it will be subject to capital gains tax.

Cost of Acquisition: For the new units acquired through switching, the purchase price will be the NAV on the day of switch-in, and this becomes the cost of acquisition for future capital gains calculations.

R. General Anti Avoidance Rules (GAAR)

GAAR provisions have been introduced by the Finance Act, 2017 to provide that an arrangement whose main purpose or one of the main purposes is to obtain a tax benefit and which also satisfies at least one of the four specified tests (i.e. arrangement is not on arm's length, misuse or abuse of tax laws, lacks or is deemed to lack commercial substance or not carried out for bona fide purpose) can be declared as an "impermissible avoidance arrangement".

The onus is on the Indian tax authorities to prove that the main purpose of any arrangement is to obtain tax benefit. Wide powers will be granted to tax authorities when GAAR is invoked for an "impermissible avoidance arrangement" which include

- disregarding or combining any step or party of the arrangement,
- ignoring the arrangement for purpose of tax laws,
- reallocating expenses and income between parties,
- relocating place of residence of a party or location of transaction,

The GAAR provisions would override the Treaty provisions in cases where GAAR is invoked. The provisions of GAAR have been made applicable from 1st April, 2017.

The IPV carried out by any SEBI registered intermediary can be relied upon by the Mutual Fund. For details, please refer sections "How to apply for KYC" and "Who are required to be KYC/CKYC compliant" of this document.

Since PAN is not mandatory for

- a. Investment (including SIP) upto Rs. 50,000 per year per investor; and
- b. Investors residing in state of Sikkim; investors should mandatorily mention their PAN Exempt KYC Reference Number ('PEKRN') for investments and attach copy of PEKRN acknowledgement issued by the KRA's.

Investors may note that where the Units are transferred in favor of the nominee, the "Know Your Customer" norms, where applicable will have to be fulfilled by the nominee.

II. Know Your Customer (KYC) Compliance

In terms of the Prevention of Money Laundering Act, 2002, the Rules issued there under and the guidelines/circulars issued by SEBI regarding the Anti Money Laundering (AML Laws), all intermediaries, including Mutual Funds, have to formulate and implement a client identification programme, verify and maintain the record of identity and address(es) of investors.

In order to bring about uniformity in the Know Your Customer (KYC) process in the securities market, Common KYC Application form and supporting documents shall be used by

all SEBI registered intermediaries viz. Mutual Funds, Portfolio Managers, Depository Participants, Stock Brokers, Venture Capital Funds, Collective Investors Investment Strategy(s), etc. Further, to avoid duplication of KYC process across SEBI registered intermediaries, a mechanism for centralization of the KYC records in the securities market has been developed. Accordingly, an intermediary shall perform the initial KYC of its clients and upload the details on the system of the KYC Registration Agency (KRA). When the client approaches another intermediary, the intermediary can verify and download the client's details from the system of the KRA. As a result, once the client has done KYC with a SEBI registered intermediary, he need not undergo the same process again with another intermediary.

For individual investors, AMFI vide its Best Practices Guidelines Circular No.68 / 2016-17 dated December 22, 2016 on 'Implementation of Central KYC (CKYC) norms', has prescribed new CKYC norms February 1, 2017, for prospective individual investors who has never done KYC under KRA regime and whose KYC is not registered or verified in the KRA system. For details, please refer the section "How to apply for KYC".

For regulating KRAs, SEBI has formulated the KYC Registration Agency (KRA) Regulations, 2011 which covers the registration of KRAs, functions and responsibilities of the KRAs and intermediaries, code of conduct, data security, etc. KRA system centralizes KYC records in the securities market. To expand the centralized database of the KYC records of the entire securities market, KRAs are required to upload the KYC details of the existing clients of the intermediaries in.

Post completion of the KYC formalities using the above referred KYC form, the investor will be allotted a unique 14 digit KIN by CKYCR, which can be used by the investor at the time of making any future investments. However, the Fund reserves the right to carry out additional KYC / ask any additional information/documents from the investor to meet the requirements of its KYC Policy.

New non-individual investors shall use the common KYC Application Form prescribed by SEBI and carry out the KYC process including In-Person Verification (IPV) with any SEBI registered intermediaries including mutual funds. The KYC Application Forms are also available on the website of the Fund viz., <https://sif.itiamc.com>.

In the event of non compliance of KYC requirements, the Trustee / AMC reserves the right to freeze the folio of the investor(s) and affect mandatory redemption of unit holdings of the investors at the applicable NAV, subject to payment of exit load, if any.

All investors (both individual and non-individual) can apply for KYC compliance as per the abovementioned process using the prescribed forms. However, applicants should note that minors cannot apply for KYC compliance and any investment in the name of minors should be through a Guardian, who should be KYC compliant for the purpose of investing with a Mutual Fund. Also, applicants / unit holders intending to apply for units / currently holding units and operating their Mutual Fund folios through a Power of Attorney (PoA) must ensure that the issuer of the PoA and the holder of the PoA must attach proof of KYC Compliance/ provide KIN at the time of investment. PoA holders are not permitted to apply for KYC compliance on behalf of the issuer of the PoA. Separate procedures are prescribed for change in name, address and other KYC related details, should the applicant desire to change such information.

For applicants who subscribe to the Units through Stock Exchange facility as detailed in this document, the KYC performed by the Depository Participant of the applicants will be considered as KYC verification done by the Trustee / AMC.

Units held in Electronic (Demat) mode

For units held in demat form, the KYC performed by the Depository Participant of the applicants will be considered as KYC verification done by the Trustee / AMC.

First In First Out (FIFO) Basis

Should a Unit holder, who holds Units allotted during the New Fund Offer or on an ongoing basis, opts for partial redemption of his unit holdings, the units shall be redeemed on a first in-first out basis, i.e. the Units allotted first shall be redeemed first.

Permanent Account Number

Where the applicant is a minor, and does not possess his/ her own PAN, the PAN of his/ her father or mother or the guardian shall be quoted, as the case may be. However PAN is not mandatory in the case of Central Government, State Government entities and the officials appointed by the courts e.g. Official liquidator, Court receiver etc. (under the category of Government) for transacting in the securities market. ITI Mutual Fund reserves the right to ascertain the status of such entities with adequate supporting documents.

Also, investors residing in the state of Sikkim are exempt from the mandatory requirement of PAN, subject to the AMC verifying the veracity of the claim of the investors that they are residents of Sikkim, by collecting sufficient documentary evidence.

In order to verify that the PAN of the applicants (in case of application in joint names, each of the applicants) has been duly and correctly quoted therein, the applicants shall attach along with the purchase* application, a photocopy of the PAN card duly self-certified along with the original PAN Card. The original PAN Card will be returned immediately across the counter after verification. The photocopy of the PAN card is not required if KYC acknowledgement issued by any KRA is made available.

5. PORTFOLIO TURNOVER DETAILS

The Investment Strategy being an open-ended equity Investment Strategy, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Investment Strategy. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Investment Strategy. The Investment Strategy has no specific target relating to portfolio turnover.

INFORMATION PERTAINING TO INVESTMENTS BY THE Investment Strategy(s) OF THE FUND

1. Derivative strategies

Trading in Derivatives:

Pursuant to SEBI Circular no. DNPD/Cir 29/2005 dated September 14, 2005 and SEBI Circular No. DNPD/Cir-30/2006 dated January 20, 2006, SEBI circular no. SEBI/ DNPD/Cir-31/2006 dated September 22, 2006 and SEBI Circular No. Cir/IMD/ DF/ 11/ 2010 dated August 18, 2010, the Investment Strategy intends to use derivatives actively in-addition to the purpose of hedging and portfolio balancing or such other purpose as may be permitted under the Regulations from time to time. The same shall be within the permissible limit prescribed by SEBI (Mutual Funds) Regulations, 1996 from time to time.

Derivative transactions that can be undertaken by the Investment Strategy include a wide range of instruments, including, but not limited to Futures, Options, swaps, any other instrument, as may be regulatory permitted.

Futures

Futures (Index & Stocks) are forward contracts traded on the exchanges & have been introduced both by BSE and NSE. Generally futures of 1 month (near month), 2 months (next month) and 3 months (far month) are presently traded on these exchanges. These futures expire on the last working Thursday of the respective months.

Illustration with Index Futures

In case the Nifty 50 near month future contract is trading at say, Rs. 3,510, and the fund manager has a view that it will depreciate going forward; the Investment Strategy can initiate a sale transaction of Nifty futures at Rs. 3,510 without holding a portfolio of equity stocks or any other underlying long equity position. Once the price falls to Rs. 3,400 after say, 20 days, the Investment Strategy can initiate a square-up transaction by buying the said futures and

book a profit of Rs. 110.

Correspondingly, if the fund manager has a positive view he can initiate a long position in the index / stock futures without an underlying cash/ cash equivalent subject to the extant regulations.

There are futures based on stock indices as mentioned above as also futures based on individual stocks. The profitability of index /stock future as compared to an individual security will inter-alia depends upon:

- **The carrying cost,**
- **The interest available on surplus funds, and**
- **The transaction cost.**

Example of a typical future trade and the associated costs

Particulars	Index Future	Actual Purchase of Stocks
Index at the beginning of the month	3500	3500
Price of 1 month future	3510	
A. Execution cost: Carry and other index future costs	10	
B. Brokerage cost: Assumed at	7.02	8.75
0.2% of Index Future		
0.25% for spot Stocks		
C. Gains on surplus fund: (Assumed 8% p.a. return on 85% of the money left after paying 15% margin) $(8\% * 3500 * 85\% * 30 \text{ days} / 365)$	19.56	0
Total Cost (A+B-C)	-2.54	8.75

Some strategies that employ stock /index futures and their objectives:

a) Arbitrage

1. **Selling spot and buying future:** In case the Investment Strategy holds the stock of a company "A" at say Rs. 100 while in the futures market it trades at a discount to the spot price say at Rs. 98, then the Investment Strategy may sell the stock and buy the futures.

On the date of expiry of the stock future, the Investment Strategy may reverse the transactions (i.e. buying at spot & selling futures) and earn a gets the 10% upside movement together with the 2% benefit on the arbitrage and thus getting a total return of 12%. The corresponding return in case of holding the stock would have been 10%.

Note: The same strategy can be replicated with a basket of Nifty- 50 stocks (Synthetic Nifty) and the Nifty future index.

2. **Buying spot and selling future:** Where the stock of a company "A" is trading in the spot market at Rs. 100 while it trades at Rs. 102 in the futures market, then the Investment Strategy may buy the stock at spot and sell in the futures market thereby earning Rs.2.

Buying the stock in cash market and selling the futures results into a hedge where the Investment Strategy has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts when there is a convergence between the cash market and the futures market. This convergence enables the Investment Strategy to generate the arbitrage return locked in earlier.

F. Buying/ Selling Stock future:

When the Investment Strategy wants to initiate a long position in a stock whose spot price is at say, Rs.100 and futures is at 98, then the Investment Strategy may just buy the futures contract instead of the spot thereby benefiting from a lower cost. In case the Investment Strategy has a bearish view on a stock which is trading in the spot market at Rs.98 and the futures market at say Rs. 100, the Investment Strategy may subject to regulations, initiate a short position in the futures contract. In case the prices align with the view and the price depreciates to say Rs. 90, the Investment Strategy can square up the short position thereby earning a profit of Rs.10 vis a vis a fall in stock price of Rs 8.

G. Hedging:

The Investment Strategy may use exchange-traded derivatives to hedge the equity portfolio. Both index and stock futures and options may be used to hedge the stocks in the portfolio.

H. Alpha Strategy:

The Investment Strategy will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying a bank stock and selling Bank Nifty future.

Execution of these strategies depends upon the ability of the fund manager to identify and execute based on such opportunities. These involve significant uncertainties and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Option Contracts (Stock and Index)

An Option gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed-upon price during a certain period of time or on a specific date.

Options are used to manage risk or as an investment to generate income. The price at which underlying security is contracted to be purchased or sold is called the Strike Price. Options that can be exercised on or before the expiration date are called American Options

while, Options that can be exercised only on the expiration date are called European Options.

Options Risk / Return Pay-off Table

Stock / Index Options	Buy Call	Sell Call	Buy Put	Sell Put
View on underlying	Positive	Negative	Negative	Positive
Premium	Pay	Receive	Pay	Receive
Risk Potential	Limited to premium paid	Unlimited	Limited to premium paid	Unlimited
Return Potential	Unlimited	Premium Received	Unlimited	Premium Received

Option contracts are of following two types - Call and Put.

Call Option: A call option gives the buyer, the right to buy specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of call option however, has the obligation to sell the underlying asset if the buyer of the call option decides to exercise the option to buy.

Put Option: A put option gives the buyer the right to sell specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of put option however, has the obligation to buy the underlying asset if the buyer of the put option decides to exercise his option to sell.

Index options / Stock options are termed to be an efficient way of buying / selling an index/stock compared to buying / selling a portfolio of physical shares representing an index for ease of execution and settlement. The participation can be done by buying / selling either Index futures or by buying a call/put option.

The risk are also different when index /stock futures are bought/sold visa- a- vis index/ stocks options as in case of an index future there is a mark to market variation and the risk is much higher as compared to buying an option, where the risk is limited to the extent of premium paid.

The illustration below explains how one can gain using Index call / put option. These same principles of profit / loss in an Index option apply in to that for a stock option.

Call Option

Suppose an investor buys a Call option on 1 lot of Nifty 50 (Lot Size: 50 units)

- **Nifty index (European option).**
- **Nifty 1 Lot Size: 50units**
- **Spot Price (S):3500**
- **Strike Price (x): 3550 (Out-of-Money Call Option)**
- **Premium:100**

Total Amount paid by the investor as premium $[50*100] =$ Rs. 5,000

There are two possibilities i.e. either the index moves up over the strike price or remains below the strike price.

Case 1- The index goes up

- **An investor sells the Nifty Option described above before expiry:**

Suppose the Nifty 50 Index moves up to 3600 in the spot market and the premium has moved to Rs 200 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty call option as the option now is in the Money.

His gains are as follows:

- **Nifty Spot:3600**
- **Current Premium:Rs.200**
- **Premium paid:Rs.100**
- **Net Gain: Rs.200- Rs.100 = Rs.100 per unit**
- **Total gain on 1 lot of Nifty (50 units) = Rs.5,000** $(50*100)$

In this case the premium of Rs.200 has an intrinsic value of Rs.50 per unit and the remaining Rs.150 is the time value of the option.

- **An investor exercises the Nifty Option at expiry**

Suppose the Nifty index moves up to 3700 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty call option as the option now is in The Money.

His gains are as follows:

- **Nifty Spot:3700**
- **Premium paid:Rs.100**
- **Exercise Price:3550**
- **Receivable on exercise: $3700-3550 = 150$**
- **Total Gain: Rs.2500** $\{(150-100)*50\}$

In this case the realised gain is only the intrinsic value, which is Rs.50, and there is no time value.

Case 2 - The Nifty index moves to any level below 3550

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.5000 (Loss is capped to the extent of Premium Paid) (Rs 100 Premium paid*Lot Size: 50 units).

Put Option

Suppose an investor buys a Put option on 1 lot of Nifty 50.

- **Nifty 1 Lot Size: 50units**
- **Spot Price (S):3,500**
- **Strike Price (x): 3450 (Out-of-Money Put Option)**
- **Premium: Rs.30**
- **Total Amount paid by the investor as premium [50*30] =Rs.1,500**

There are two possibilities i.e. either the index moves over the strike price or moves below the strike price.

Let us analyze these scenarios. Case 1 – The index goes down

- **An investor sells the Nifty Option before expiry:**

Suppose the Nifty 50 index moves down to 3400 in the spot market and the premium has moved to Rs. 80 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty Put Option as the option now is in the Money. His gains are as follows:

- **Nifty Spot:3400**
- **Premium paid:Rs.30**
- **Net Gain: Rs.80 - Rs.30 = Rs.50 per unit**
- **Total gain on 1 lot of Nifty (50 units) = Rs.2,500 (50*50)**

In this case the premium of Rs.80 has an intrinsic value of Rs.50 per unit and the remaining Rs.30 is the time value of the option.

An investor exercises the Nifty Option at expiry (It is an European Option)

Suppose the Nifty index moves down to 3400 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty Put Option as the option now is in the Money.

His gains are as follows:

- **Nifty Spot:3400**
- **Premium paid:Rs.30**
- **Exercise Price:3450**
- **Gain on exercise: 3450-3400 =50**
- **Total Gain: Rs.1,000{(50-30)*50}**

In this case the realised amount is only the intrinsic value, which is Rs.50, and there is no time value in this case.

Case 2 - If the Nifty 50 Index stays over the strike price which is 3450, in the spot market then the investor does not gain anything but on the other hand his loss is limited to the premium paid.

- **Nifty Spot:>3450**
- **Net Loss Rs.1,500 (Loss is capped to the extent of Premium Paid) (Rs 30 Premium paid*Lot Size: 50 units).**

Covered Call Strategy

The covered call strategy is a strategy where a fund manager writes call options against an equivalent long position in an underlying stock thereby giving up a part of the upside from the long position. The strategy allows the fund manager to earn premium income from the option writing in addition being able to capture the remaining part of the upside.

Assumptions:

Current price of stock A: Rs. 27.87 per share 1 contract = 100 shares

Total no of contracts: 10 Strike price: Rs. 30/- per share Premium: Rs. 0.35 per share

Suppose, on April 16, 2024, the writer of the call owns 1,000 shares of Company A, which is currently trading at Rs. 27.87 per share. The writer of the call writes 10 call option contracts for company A with a strike price of Rs. 30 per share that expires in July 2024. The writer receives premium of 0.35 per share for the calls, which equals Rs. 35.00 per contract for a total of Rs. 350.00.

Total premium = (Rs. 0.35 per share) * (100 shares per contract) * (10 contracts) = Rs. 350.

The following can be the scenarios reflecting risks and benefits at the end of the option expiry:

Case 1 - Stock falls below current price of Rs. 27.87 per share: The option expires worthless. Hence the loss from the stock position gets reduced to the extent of the premium income.

Case 2 - Stock goes up above current price but remains below Rs. 30 per share (strike price): The option expires worthless. Hence the income from the gains in the stock price gets further boosted to the extent of the premium income.

Case 3 - Stock goes above Rs. 30 per share: Option position goes out of the money for the writer but the losses from the option position are matched by the gains from the underlying stock position above Rs. 30 per share. Hence the return from the position is equal to the return from stock upto the strike price of Rs. 30 per share and the premium income from the option.

Benefits of using Covered Call Strategy in Mutual Funds:

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Investment Strategy. The strategy offers the following benefits:

- a. Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund Investment Strategy, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- b. Generating additional returns in the form of option premium in a range bound market. Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Fixed Income Derivative Instruments:

The Investment Strategy may use Derivative instruments like interest rate swaps like overnight indexed swaps (OIS), forward rate agreements, interest rate futures or such other Derivative instruments as may be permitted under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and guidelines from time to time.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of circular no. MFD.BC.191/07.01.279/1999-2000 and MPD. BC.187/07.01.279/1999- 2000 dated November 1, 1999 and July 7, 1999 respectively issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Investment Strategy will use Derivative instruments for the purpose of hedging and portfolio balancing.

The Investment Strategy may also use derivatives for such

purposes as maybe permitted from time to time. Further, the guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual Fund.

IRS and FRAs do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in Derivatives will be in accordance with the extant SEBI Regulations / guidelines. Presently Derivatives shall be used for hedging and / or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Investment Strategy at a lower cost.

The following information provides a basic idea as to the nature of the Derivative instruments proposed to be used by the Investment Strategy and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Using Overnight Indexed Swaps

In a rising interest rate scenario, the Investment Strategy may enhance returns for the Investor by hedging the risk on its fixed interest paying assets by entering into an OIS contract where the Investment Strategy agrees to pay a fixed interest rate on a specified notional amount, for a pre determined tenor and receives floating interest rate payments on the same notional amount. The fixed returns from the Investment Strategy assets and the fixed interest payments to be made by the Investment Strategy on account of the OIS transaction offset each other and the Investment Strategy benefits on the floating interest payments that it receives.

The Investment Strategy may enter into an opposite position in case of a falling interest rate scenario, i.e. to hedge the floating rate assets in its portfolio the Investment Strategy enters into an OIS transaction wherein it receives a fixed interest rate on a specified notional amount for a specified time period and pays a floating interest rate on the same notional amount. The floating interest payments that the Investment Strategy receives on its floating rate securities and the floating interest payments that the Investment Strategy has to pay on account of the OIS transaction offset each other and the Investment Strategy benefits on the fixed interest payments that it receives in such a scenario.

Illustration:

Assume that the Investment Strategy has a Rs. 25 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Investment Strategy is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Investment Strategy can enter into a 6 month MIBOR swap. Through this swap, the Investment Strategy will receive a fixed predetermined rate (assume 7.75%) and pays the "benchmark rate" (MIBOR), which is fixed by the NSE or any other agency such as Reuters. This swap would effectively lock-in the rate of 7.75% for the next 6 months, eliminating the daily interest rate risk.

This transaction is usually routed through an intermediary who runs a book and matches deals between various counter parties. The steps will be as follows:

Assuming the swap is for Rs. 25 Crores for April 01, 2024 to September 30, 2024. The Investment Strategy is a fixed rate receiver at 7.75% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).

On April 01, 2024, the Investment Strategy and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers

Association (ISDA) norms.

On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On September 30, 2024, they will calculate the following:

- **The Investment Strategy - fixed rate receiver is entitled to receive interest on Rs. 25 Crores at 7.75% for 181 days i.e. Rs. 96.08 lakhs, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.**
- **The counterparty is entitled to receive daily compounded MIBOR for 181 days & pay 7.75%fixed.**
- **On September 30, 2024, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 96.08 lakhs, the Investment Strategy will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Investment Strategy the difference.**

The above example illustrates the use of Derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement

A Forward Rate Agreement is an agreement to pay or receive the difference between the agreed fixed rate and actual interest prevailing at a stipulated future date. The interest rate is fixed now for a future agreed period wherein only the interest is settled between the counter parties.

Illustration:

Assume that on April 30, 2024, the 30 day Commercial Paper (CP) rate is 8.50% and the Investment Strategy has an investment in a CP of face value Rs. 50 Crores, which is going to mature on May 31, 2024. If the interest rates are likely to remain stable or decline after May 31, 2024, and if the fund manager, who wants to redeploy the maturity proceeds for 1 more month does not want to take the risk of interest rates going down, he can then enter into a following Forward Rate Agreement (FRA) say as on April 30, 2024:

He can receive 1 X 2 FRA on April 30, 2024 at 8.50% (FRA rate for 1 months lending in 1 months time) on the notional amount of Rs. 50 Crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. May 31, 2024 falls to 8.25%, then the Investment Strategy receives the difference 8.50 – 8.25 i.e. 25 basis points on the notional amount Rs. 50 Crores.

Interest Rate Futures

An Interest Rate Futures (IRF) contract is an agreement to buy or sell a debt instrument at a specified date at a price that is fixed today. Assume that the Investment Strategy holds a GOI security and the fund manager has a view that the yields will go up in the near future leading to decrease in value of the investment and subsequent decrease in Net Asset Value (NAV) of the fund. In this case the fund manager may use Interest Rate Futures to mitigate the risk of decline of Net Asset Value (NAV) of the fund. The illustration given below will demonstrate the use of IRF.

Illustration:

Assume that as on April 30, 2024, the Investment Strategy holds a benchmark 10 year paper trading at Rs. 98.35 at a yield of 8.05% and the May 2024 futures contract on the 10 year notional 7% coupon bearing Government Paper is trading at Rs92.10 at a yield of 8.17%. The fund manager decides to hedge the exposure by taking a short position in the September 2024 IRF contract.

On May 24, 2024 the yield of the benchmark 10 year paper has increased to 8.10% and the price has decreased to Rs 95.00 and the May 2024 futures contract on the 10 year notional 7% coupon bearing Government Paper is trading at Rs91.50 at a yield of 8.25%. The fund manager unwinds the short position by buying the May 2024 futures contract. The transaction results in profit from the futures position, against the corresponding loss from the long Government of India security position.

Certain risks are inherent to Derivative strategies viz. lack of opportunities, inability of Derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of Derivatives, the investors are advised to refer to Investment Strategy Specific Risk Factors given elsewhere in this document

1. The Investment Strategy(s) having High or Very High risk on the Risk band in terms of SEBI Master circular dated June 27, 2024, Chapter 17.4 – ‘Product labeling in mutual funds’, (risk band as of the most recent period at the time of declaration of market dislocation) and
2. The Investment Strategy(s) classified in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix in terms of SEBI Master circular dated June 27, 2024, Chapter 17.5– ‘Potential Risk Class Matrix
3. The Swing pricing Framework shall apply in case of scenarios related to net outflows from the Investment Strategy(s).
4. A minimum swing factor, as hereunder, shall be made applicable and the NAV for such Investment Strategy(s) will be adjusted for swing factor upon declaration of market dislocation by SEBI.

Illustration

In the event of a swing pricing scenario, NAV of the relevant Investment Strategy(s) will be swung down as follows:

- **Total net assets: Rs. 100 crore; No. of Units : 10 crore**
- **Assumed Swing factor on the NAV = 2.0%. Thus, NAV will get adjusted (reduced) to the extent of the 2.0% swing factor.**
- **Computed NAV per share = Total Net Assets/No. of units (100 crore/10 crore) = INR 10.00**
- **Swing-adjusted NAV (i.e. post applying swing factor) = Computed NAV**

$$* (1 - \text{Swing factor \%}) = 10 * (1 - 0.02) = \text{INR } 9.80$$

Impact of Swing pricing

- a) When the Swing pricing framework is triggered and swing factor is made applicable, both the incoming investors (i.e. who submit purchase / switch-in requests) and outgoing investors

2. SWING PRICING -

Background

Swing pricing refers to a process of adjustment of a fund's net asset value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund. Swing pricing is aimed to ensure fairness of treatment of entering, exiting and existing investors in mutual fund Investment Strategy(s), particularly during market dislocation.

Trigger for Swing pricing

Upon announcement of market dislocation event by SEBI / notified by AMFI, investors are requested to note that swing pricing shall be mandatorily applied for a specified period, to the qualifying open ended debt Investment Strategy(s) basis below parameters:

- (i.e. who submit redemption/ switch out requests) shall get NAV adjusted to the extent of swing factor applied.
- b) Swing pricing will be made applicable to all unitholders at PAN level with an exemption for redemptions up to Rs. 2 Lacs for each Investment Strategy.
- c) Disclosures pertaining to NAV adjusted for swing factor along with performance impact shall be made in the prescribed format in the Investment Strategy Information Document and in Investment Strategy wise Annual Reports and Abridged summary thereof.

Swing Pricing upon re-opening of a Investment Strategy after announcement of winding-up

Pursuant to SEBI letter no. SEBI/HO/IMD/Pod-1/OW/P/2024/24219/1 dated July 30, 2024 and AMFI Best Practices Guidelines Circular No.96-A/2021-22 dated October 30, 2024 ('AMFI Guidelines'), has issued a guidelines for swing pricing framework for re-opening of a Investment Strategy after announcement of winding-up.

In case the Investment Strategy wind up in future and the AMC reverse the decision of such winding up post announcement, the Investment Strategy shall mandatorily invoke the swing pricing upon re-opening subscriptions and redemption.

The swing factor should be higher of swing factor suggested by the Board of AMC or a minimum period of 7 working days, upon re-opening a Investment Strategy for subscriptions and redemptions. Further, the indicative range of swing factor for the parameter of "Re-opening of the Investment Strategy after announcement of Winding -Up" shall be the same as mentioned in AMFI guidelines.

3. PROVISIONS ON CREATION OF SEGREGATED PORTFOLIO/SIDE POCKETING

SEBI has, vide Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, Chapter 4.4-' Creation

of segregated portfolio in mutual fund Investment Strategy(s)' permitted creation of segregated portfolio of debt and money market instruments by mutual funds Investment Strategy(s), in order to ensure fair

treatment to all investors in case of a credit event / actual default of either the interest or principal amount (in case of unrated debt or money market instruments).

The creation of a segregated portfolio is optional and may be created at the discretion of the Board of Directors of ITI Asset Management Limited and ITI Mutual Fund Trustee Private Limited, in case of a credit event at issuer level i.e. downgrade in credit rating by a Credit Rating Agencies (CRA), as under:

1. Downgrade of a debt or money market instrument to 'below investment grade',
2. Subsequent downgrades of the said instruments from 'below investment grade', or
3. Similar such downgrades of a loan rating.

In case of difference in ratings by multiple CRAs, the most conservative rating shall be considered. Creation of segregated portfolio shall be based on issuer level credit events as mentioned above and implemented at the ISIN level.

The segregated portfolio of unrated debt or money market instruments shall be created only in case of actual default of either the interest or principal amount.

Process for Creation of Segregated Portfolio:

The AMC shall decide on creation of segregated portfolio of the Investment Strategy on the day of credit event or actual default of either the interest or principal amount (in case of unrated debt or money market instruments). Once the AMC decides to segregate portfolio, the AMC shall:

- i. seek approval from the Board of Directors of the Trustee, prior to creation of the segregated portfolio.
- ii. immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors of the Investment Strategy. The AMC shall also disclose that the segregation shall be subject to Trustee approval. Additionally, the said press release shall be prominently disclosed on the website of the AMC.
- iii. ensure that till the time the Trustee approval is received, which in no case shall exceed 1 (one) business day from the day of credit event or actual default of either the interest or principal amount (in case of unrated debt or money market instruments), the subscription and redemption in the concerned Investment Strategy shall be suspended for processing with respect to creation of units and payment on redemptions.

Once the Trustee approval is received,

- a. The segregated portfolio shall be effective from the day of credit event or actual default of either the interest or principal amount (in case of unrated debt or money market instruments).
- b. The AMC shall issue a press release immediately with all relevant information pertaining to the segregated portfolio of the Investment Strategy. The said information shall also be submitted to SEBI.
- c. An e-mail or SMS should be sent to all unit holders of the concerned Investment Strategy.
- d. The NAVs of both segregated and main portfolio shall be disclosed from the day of the credit event or actual default of either the interest or principal amount (in case of unrated debt or money market instruments).

e. All existing investors in the Investment Strategy as on the day of the credit event or actual default of either the interest or principal amount (in case of unrated debt or money market instruments), shall be allotted equal number of units in the segregated portfolio as held in the main portfolio.

f. No redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in the segregated portfolio, the AMC shall enable listing of units of segregated portfolio on the recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests.

If the Trustee does not approve the proposal to create a segregated portfolio, the AMC will issue a press release immediately informing investors of the same. Thereafter, the transactions will be processed based on the applicable NAV of total portfolio.

4. SHORT SELLING / STOCK LENDING

The Investment Strategy may engage in short selling of securities in accordance with the framework relating to Short Selling and securities lending and borrowing specified by SEBI.

Securities Lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.

Short-selling is the sale of shares or securities that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock/security he shorted and returns the stock/security to the lender to close out the loan. The inherent risks are Counterparty risk and liquidity risk of the stock/security being borrowed. The security being short sold might be illiquid or become illiquid and covering of the security might occur at a much higher price level than anticipated, leading to losses.

Subject to the SEBI Regulations as applicable from time to time, the Fund may, if the Trustee permits, engage in Stock Lending. Stock Lending means the lending of securities to another person or entity for a fixed period of time, at a negotiated compensation in order to enhance returns of the portfolio. The securities lent will be returned by the borrower on the expiry of the stipulated period. The AMC will adhere to strict limits should it engage in Stock Lending. 1. Not more than 20% of the net assets of the Investment Strategy can generally be deployed in Stock Lending. 2. Not more than 5% of the net assets of the Investment Strategy can generally be deployed in Stock Lending to any single counter party. The Fund may not be able to sell such lent out securities and this can lead to temporary illiquidity.

5. STAMP DUTY

Pursuant to Notification No. S.O. 1226(E) and G.S.R. 226(E) dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, read with Part I of Chapter IV of The Finance Act, 2019, notified on February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India, a stamp duty @0.005% of the transaction value of units would be levied on applicable mutual fund inflow transactions, with

effect from July 1, 2020. Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchase transactions (including Reinvestment of Income Distribution cum capital withdrawal and Transfer of Income Distribution cum capital withdrawal) to the unitholders would be reduced to that extent.
